Idempotency Check 1

Just now (15s) 3 Python

```
    # files that disappeared from the source: archive them (never silently lose raw history)
    removed = []
    if remote:   # safety: an empty listing means something went wrong, not "everything was deleted"
        for name in [n for n in manifest["bls"] if n not in remote]:
            src = f"{BLS_DIR}/{name}"
            if os.path.exists(src):
                shutil.move(src, f"{ARCHIVE_DIR}/{name}_{snapshot_id()}")
            del manifest["bls"][name]
            removed.append(name)
        save_manifest(manifest)

    print("Downloaded:", downloaded)
    print("Skipped (unchanged):", skipped)
    print("Archived (removed at source):", removed)
```

```
Files at source: 12 -> ['pr.class', 'pr.contacts', 'pr.data.0.Current', 'pr.data.1.AllData', 'pr.duration', 'pr.footnot
'pr.measure', 'pr.period', 'pr.seasonal', 'pr.sector', 'pr.series', 'pr.txt']
Downloaded: []
Skipped (unchanged): ['pr.class', 'pr.contacts', 'pr.data.0.Current', 'pr.data.1.AllData', 'pr.duration', 'pr.footnote',
'pr.measure', 'pr.period', 'pr.seasonal', 'pr.sector', 'pr.series', 'pr.txt']
Archived (removed at source): []
```

Idempotency Check 2

Just now (1s) 4 Python

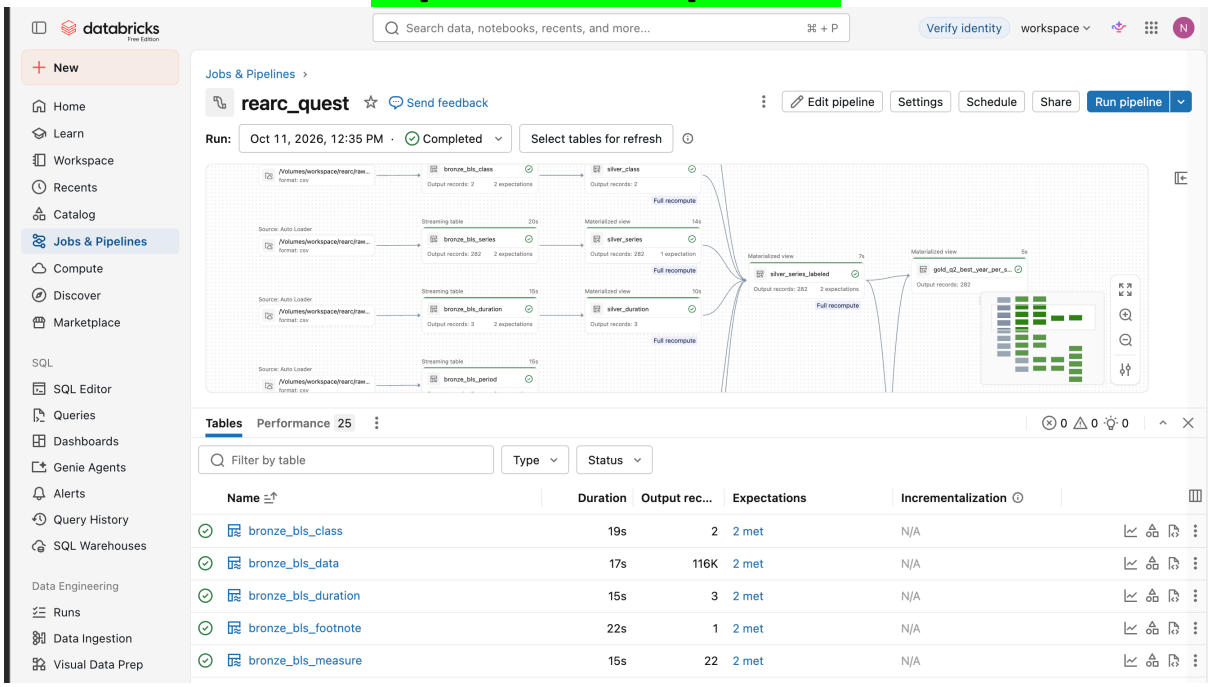

```
    r = session.get(POP_URL, timeout=60)
    r.raise_for_status()
    payload = r.json()
    digest = hashlib.sha256(json.dumps(payload, sort_keys=True).encode()).hexdigest()

    manifest = load_manifest()
    if manifest["population"].get("sha256") == digest:
        print("Population unchanged, skipped")
    else:
        snap = snapshot_id()
        os.makedirs(f"{POP_DIR}/{snap}", exist_ok=True)
        with open(f"{POP_DIR}/{snap}/population.json", "w") as f:
            json.dump(payload, f)
        manifest["population"] = {"sha256": digest, "snapshot": snap}
        save_manifest(manifest)
        print("Population saved")

    print("Top-level type/keys:", list(payload.keys()) if isinstance(payload, dict) else type(payload))
    records = payload["data"] if isinstance(payload, dict) and "data" in payload else payload
    print("First record:", records[0])
```

```
Population unchanged, skipped
Top-level type/keys: ['annotations', 'page', 'columns', 'data']
First record: {'Nation ID': '01000US', 'Nation': 'United States', 'Year': 2013, 'Population': 316128839.0}
```
